David,

Thanks for sending this to us. Based on review of the information provided and discussion with the Trustees, our comments are as follows.

We would like to see a map of the proposed route in order to better understand the request. Our current understanding is that the proposed route has a minimum 100 feet separation and hence it does not pass through the Pristine site nor the on-site remediation system. However, the proposed route is in close proximity to Pristine's off-site extraction wells and buried infrastructure in the area south of the site, and appears to cross our buried forcemain in multiple locations. We are concerned about possible interference during construction and future accessibility to our forcemain and wells for maintenance purposes. We will also have to review the proposed route relative to the location of existing monitoring wells.

Please let me know if you have any questions.

Regards,

Julian Hayward

Julian,

I would like your thoughts on this before I respond.

Thanks,

David

Subject: Pristine Superfund site Reading, Ohio

Mr. Linneair / Mr. Palomeque: The attached correspondence outlines Duke Energy Ohio's assessment that the proposed Central Corridor Pipeline Project (Ohio Power Siting Board Case No. 16-0253-GA-BTX) will not have negative effects on the Pristine Inc. Superfund site at 410 Cavett Avenue in Reading, Ohio. Duke Energy Ohio is requesting a response from USEPA concerning this property. If you need additional information concerning the project, the docket in the case can be found at the following link:

<http://dis.puc.state.oh.us/CaseRecord.aspx?Caseno=16-0253&link=DIVA>

Please contact me if you have questions.

Thank You

James Olberding, PMP
